## Commander launches deep cycle GEL range

Commander has announced the launch of a new range of GEL sealed deep cycle batteries to complement its existing Heavy Duty INDUSTRIAL and RECREATION AND MARINE ranges.

Having already established itself as a provider of quality industrial deep cycle batteries in Australia and New Zealand, Commander now offers a new range of GEL Sealed Technology batteries to provide true deep cycle power for a wide range of recreational, marine and other uses.

True deep cycle batteries have thicker, heavier plates and their construction incorporates more lead, meaning they can provide maximum power and deep cycle performance.

The new Commander GEL range incorporates advanced gel electrolyte technology and a sealed maintenance-free design. A spill-proof design means they will not spill electrolyte, even when accidentally tipped upside down. The potential for acid hazard risk or corrosion to external surroundings is minimised.

Commander GEL batteries are completely maintenance free and require no topping up of liquid electrolyte. Their valve-regulated recombinant design means they can be installed in hard to reach locations without the need for accessibility.

Because the lead plates are held in an immobilised gel, the batteries provide extremely good vibration resistance for a range of mobile uses.

Commander GEL batteries are ideal for recreational vehicles and accessories, boating accessories, electric powered vehicles, scooters, wheelchairs and solar power systems. For recreational and marine use, they offer superior deep cycle performance for a range of auxiliary equipment including:

- Refrigerators
- Lighting
- Televisions
- DVD / CD players
- Air compressors
- Inverters (for 240VAC power)
- Electric outboard engines.

Commander GEL batteries can also be conveniently recharged by delivering a constant voltage automatic charge with the following:

- Solar panels
- Charger
- Generator

Commander's INDUSTRIAL Heavy Duty range is built tough with the best materials available to provide longer life true deep cycle performance when continually discharged and recharged.

The Commander INDUSTRIAL range has the proven strength and reliability needed to withstand the extreme rigours of long, deep discharges and slow recharging in industrial work environments.

They also have thicker, heavier plates and their construction incorporates more lead, meaning they can provide maximum power and performance when industrial deep cycle power is required.

Commander INDUSTRIAL batteries are ideal for situations that require dependable deep cycle power including:

- Utility vehicles
- Sweeper and scrubber vehicles
- Scissor lifts
- Recreational auxiliary equipment
- Golf buggies
- Solar power systems.

Commander also offers a range of RECREATION AND MARINE Heavy Duty batteries. These are ideal for starting and deep cycling performance in heavy duty recreational and marine applications.

Incorporating a quality construction and tough internal components, Commander RECREATION AND MARINE batteries can withstand the rigours associated with marine use to provide dependable heavy duty power and longer cycle life on the water.

Because of their ability to provide both cycling and starting power, the batteries are also ideal to provide auxiliary power for recreational activities, such as 4WD dual battery systems.

The entire Commander range is backed with a 12-month warranty and is available through CenturyYuasa's extensive distribution network.
